

Reaching for the “Cloud”

A cloud-based OMS saves time and money

Infrastructure Costs

Infrastructure costs take up a large portion of an annual IT budget, including hardware costs, upgrades, backups, personnel salaries, etc. Switch to the cloud and cut the expenses. You will no longer need to pay for expensive servers or software licenses.

Pay as You Go

With the cloud, you only pay for the services you use, and nothing else. With a pay for use model, you will save a great deal of money, cutting out expenditures on unnecessary equipment. This is especially true for smaller or rapidly growing businesses.

Operational Costs

On premise software needs to be monitored and maintained. It's not just about reducing costs but gaining business value through effective resource allocation, multichannel order and inventory visibility and improved customer service.

From business growth to increased productivity, a cloud-based OMS offers multiple benefits across the company. Many companies have seen a measurable impact when utilizing a cloud-based OMS, and the numbers are expected to grow much stronger in years to come.
