

# Advanced Order Processing Module

*Streamlining the Processing of Large Order Volumes*

*The Advance Order Processing Module (AOPM) allows merchants to process high volumes of orders with less resources. AOPM removes bottlenecks in batch process and printing enabling multiple users and printers to run simultaneously. Handle large order volume while eliminating bottlenecks and reducing expense with AOPM and M.O.M. Version 11.*

## The Challenge - Efficiently Processing Large Order Volumes

*Today in M.O.M. only one user can process one batch at a time, connected to one printer and cannot save batch configuration and order filters.*

- Single User Batch Processing
- Single Printer
- Often requires more team members
- Order Accuracy issues
- Manual Batch Configuration

## The Solution – Introducing the Advanced Order Processing Module

*Now multiple users can process multiple batches at the same time, connected to multiple printers with each user having the ability to save batch configurations and order filters.*

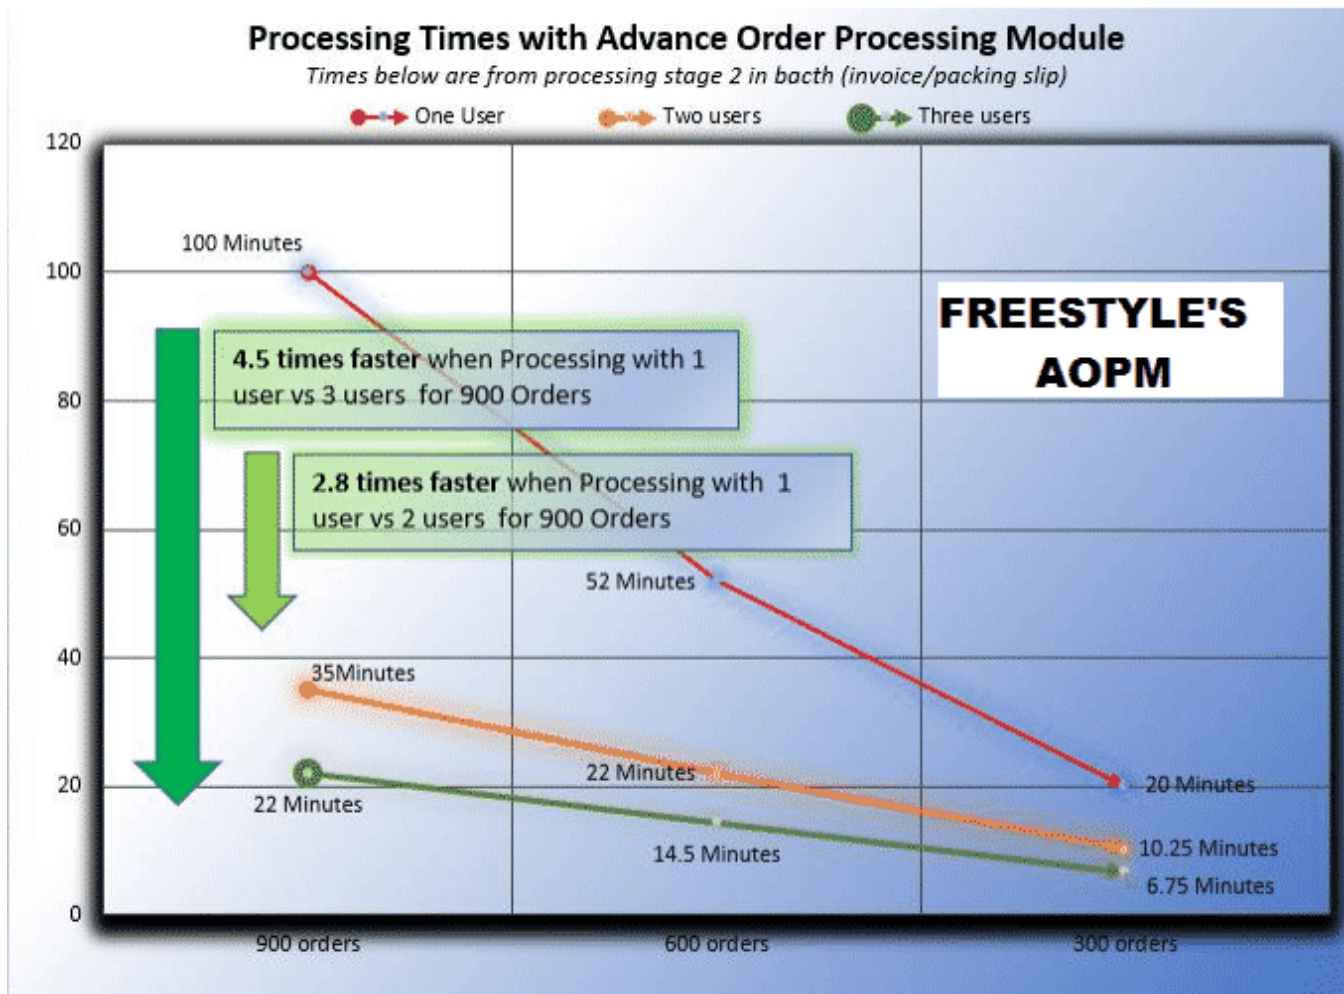

- Cartonization gives box recommendations
- Multiple users access to batch processing
- Multiple user access to multiple printers
- Configurable batch processing at user level
- Save Preset Filters for Batch Processing
- View order details within Batch Processing
- Order Progression Report

## BENEFITS OF USING M.O.M. ADVANCE ORDER PROCESSING MODULE

- Handle increased order volume while eliminating bottlenecks and reducing expenses
- Cartonization to select the perfect box
- Handle higher order volume
- Multiple printers eliminates single point of failure
- Multiple users can run batches simultaneously
- Easy batch configuration setup
- Faster order processing time
- Reduce seasonal staffing
- Reduce overtime cost
- Reduce training cost
- Streamline Order Processing
- Higher order accuracy
- Track order progression
- Identify potential improvements for order processing

## Advanced Order Processing Module Processing Times

The power of the Advance Order Processing Module is illustrated below. When batches are run by multiple users vs. the current one user, the process time is exponentially faster.

Advance Order Processing allows merchants to have multiple resources processing simultaneously. The illustration above shows the processing time for Stage 2 (invoice and packing), comparing a single user vs multiple users. The results show that processing time is **2.8 times faster** for two users and **4.5 times faster** for three users when compared with a single user processing the same batch.

Your business will be able to process an increased amount of orders faster with less cost and reduced staffing levels.

**What will you do with the additional revenue and profitability?**

To learn how the Advance Order Processing Module can help you process more orders and grow your business, please contact us at
