

# Address Correction and Verification Module (ACVM)

*Reduce shipping delays and carrier-imposed penalty fees by correcting inaccurate addresses*

*When you utilize incorrect addresses, it harms your business in more ways than one. The ACVM module can help you validate your customer address list, reduce shipping delays, reduce carrier fees, and get packages out the door more quickly.*

## The Challenge - Inaccurate Addresses Lead to Shipping Delays and Carrier-Imposed Penalties

*Inaccurate addresses are hurting your business in more ways than one. Your packages are getting delayed or returned with penalties imposed by carriers, causing customer frustration and added expenses to your business.*

## The Solution – Introducing ACVM

*Now you can verify customer addresses directly in M.O.M. with the Address Correction and Verification Module.*

- Allows you to verify customer addresses directly through M.O.M.
- Utilizes a database of addresses directly from United States Postal Service
- Ensures the most accurate address data available
- Reduces shipping delays and carrier-imposed penalty fees for correcting inaccurate addresses.

## KEY BENEFITS OF ACVM

Handle increased order volume while reducing inefficiencies and expenses.

- Avoid Address Correction Charges from Carrier
- Reduce Customer Dissatisfaction
- Data Hygiene
- Validate Address Individually
- Validate Addresses in Bulk via List Manage Module
- Validate Addresses on Imported Orders
- Validated Addresses for customers for marketing and catalogs
